Clarifying the Complex

Solution:

GoRPM  for Higher Education

A GoRPM implementation for a private research university in Massachusetts. This implementation integrates data for over 800 buildings and more than 8,000 projects for visualization, analysis, and reporting.

RESULTS

Centralized Facility Information Portal

- **A single location to access all building and project information, integrating data from multiple source systems**
- **An intuitive interface for users to access information, navigating through a hierarchy based on their own familiar organizational structure, through maps, and through search and filter capabilities**
- **Flexible user management with detailed roles and permissions, integrated with institutional user authentication system for single sign-on**

“

The GoRPM solution provided exactly the detailed user management control that we needed to provide efficient and secure access to facilities and capital project data for users across the institution.

Data Integration,
Visualization, and Reporting

Solution:

GoRPM for Higher Education

Geospatial Data Management
A powerful GIS solution

8806 Projects

Permissions controlled by project type, building owner, or project owner

Eliminate stove pipes by integrating facility asset data from across systems and sources to provide more complete information for decision making.

854 Buildings

Varying types and owners, spread across multiple campuses

Fully distribute and access existing institutional knowledge, to reduce redundancy of data collection and analysis efforts.

24 Locations

Summarize information from across locations, or drill-down into details within any location, as needed

Control access to types and levels of information for various users and establish user roles that simplify management of complex user access and permissions requirements.

1 Central System

No need to search multiple systems of record, as GoRPM is the central facility information portal

Flexible user management, with robust roles and permissions.

Geospatial views of information for intuitive navigation and quick access to the right data.

Automated reporting expedites analysis and inter-departmental communication.
